Full Stack Developer with around six years of experience in fast-paced development environments. I have a deep understanding of modern development frameworks, tech stacks, and services, paired with experience supporting and updating legacy code. Always eager to learn new technologies to fit project needs, whether it's building a customer facing frontend or creating custom backend solutions.

Work Experience

Full Stack Developer - Scoutside / Bear Group   *November 2021 - September 2024*

- Built and maintained headless Shopify sites using frameworks such as Hydrogen and Next JS, services like Nacelle and Vercel, and using CMSs such as Sanity and Pack Digital.
- Developed custom Shopify themes and subscription portals using modern technologies to provide tailored and responsive Shopify storefronts.
- Created custom Shopify apps for embedded admin interfaces and unique customer experiences with Next and other technologies.
- Led website and database migrations with over 100,000 active subscribers to new subscription services and platforms.
- Worked with AWS and Git Actions to create continuous deployment processes for custom applications and services.
- Experience converting legacy code and creating new applications through Shopify Functions and serverless frameworks.

Freelance Software Development   *July 2020 - November 2021*

- Built a network of sites using Next JS and custom Express APIs.
- Built a custom CMS for managing international imports.

Full Stack Developer - Subsync Inc.   *September 2020 - January 2021*

- Developed frontend applications using Next JS.
- Created automatic deployment processes with Docker and AWS.
- Developed RESTful API to interface with Raspberry Pi devices.
- Handled migrations for databases using Snowflake.

Full Stack Developer - Your Design Guys   *October 2018 - July 2020*

- Built out customer facing frontend apps using React JS and Vue.
- Developed and maintained custom PHP plugins.
- Used many frameworks like Laravel, Lumen, and ASP.NET.
- Handled deployment of websites and cloud applications, managed DNS settings, and set up migrations through Azure and AWS.

Highlights

Well versed in JavaScript, TypeScript, React, Vue, Next, and more

————————————

Experience with A/B testing, gathering analytics, unit testing, and QAing code

————————————

Excellent Written/Verbal Communication Skills

————————————

Proven Ability to Learn New Tech Stacks, Applications, and Services to Fit Unique Project Goals
